/ Evaporative Cooling Vest
(Mandarine Collar with Detachable Sleeve)

/ Product Range

• Jacket Sleeveless • Full sleeve • Caps • Neckband

/ Evaporative Cooling Sport Cap

The cooling material is integrated directly into hat panels. Provides 4-6 hours of cooling relief. Designed specifically for outdoor activities and safety.

Neck Band

Low profile hook & loop closure ideal for use under uniforms. Comfortable, 100% cotton outer with fabric inner.

Custom colours & sizes (men & women) also available.

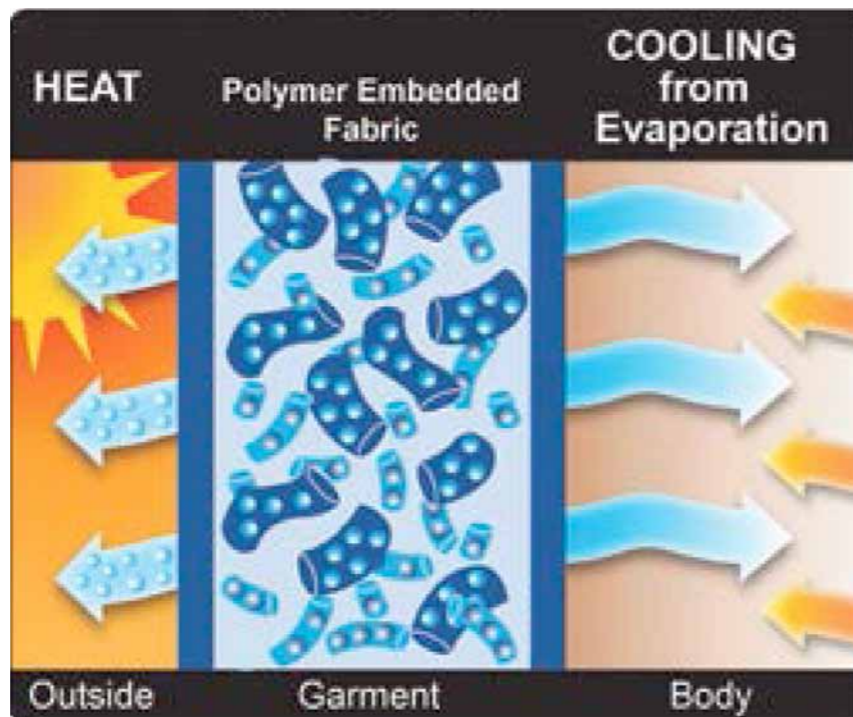

EVAPORATIVE COOLING TECHNOLOGY

Our combination of specialized fabrics and fibers creates an advanced water management system that we call Techcool™. Our unique Techcool™ fabric absorbs, stores and released water within the multi layered structure. Water is “released” through evaporation, energy is consumed, and a chill effect is created. our Techcool™ fabric actually cools the body exactly the same way the body cools itself... through evaporation. We simply supercharge the natural cooling process.

How does it Work?

Evaporative Cooling is a simple and effective technology which works by combining water with our **Polymer Embedded Fabric (PEF)** to create garments that gradually release water through evaporation to keep you cool and comfortable. Typical applications include **industrial safety, construction, emergency services, military, outdoor recreation, athletics, motorcycling etc.!!**

In the GCC where summer temperatures can rise up to 50° Celsius, these cooling products give great cooling for multiple hours. Using an innovative cooling technology called Evaporative cooling, **these products keep you cooler by 10-15 F** on any given summer day.!

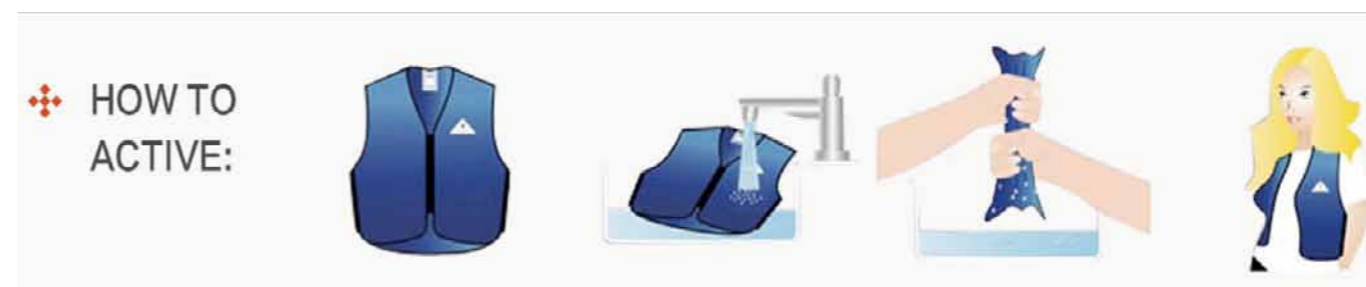

TechCool Multi Layer Construction

How to Activate

To activate our Techcool and Procool™ evaporative cooling products, simply submerge the item in water for 1-2 minutes allowing the Techcool and Procool™ fabric to absorb the water. Gently squeeze out any excess water, wipe dry and the garment is ready to wear.

The garment will remain activated for hours and can be re-hydrated by following these simple steps.

Who Uses This Technology ... anyone who works or recreates in warm weather Best Conditions for Use ... warm, dry climates

How Are These Products Different ... instead of capturing water with crude super-absorbent powders, we use specially designed fibers to provide uniform absorption and cooling.

Technical Features

-  Evaporative Cooling Technology
-  Requires Exposure to Air Flow
-  Best Conditions = Dry Heat
-  Unisex Product Design
-  Female Specific Product Design
-  Product Includes High Visibility Fabric
-  Product is ANSI Class II Compliant

Product Benefits

- Cost effective personal cooling solution including vests and accessories
- Promotes comfort, enhances performance, ensures safety in high heat conditions
- Provides extended cooling comfort and heat stress prevention
- Lightweight, durable and reusable
- Commonly found on construction sites, sports fields, motorcyclists and a variety of others
- Activated by simply submerging in water
- Will last for hours and can be reactivated by re-submerging in water
- Simple and easy to use
- Multiple sizes and styles allow for comfortable fit
